Branch: Artificial Intelligence & Machine Learning (AI/ML)

Batch: 2025

Year: First Year (Expected Graduation: 2026)

University: VIT Bhopal University

Introduction : Digital literacy refers to the ability to use digital tools, platforms, and technologies effectively and responsibly. In today's academic and professional world, students must not only know how to access information but also how to evaluate, communicate, and create content online. This project was designed to help me build awareness about digital literacy and apply it in practical ways.

Through five structured tasks, I explored different aspects of digital literacy: creating infographics, building a digital portfolio, using coding and collaboration platforms, practicing email etiquette, and researching cybercrime awareness. Each task gave me hands-on experience with tools like Canva, GitHub, LinkedIn, Kaggle, HackerRank, Google Forms, and more.

The aim of this project is to prepare students like me for placements, higher studies, and safe online practices. By completing these tasks, I learned how to present myself professionally, communicate effectively, and protect myself from online risks. This report summarizes my journey and reflections on each task.

Task 1

For Task 1, I created a one-page infographic using Canva to explain the concept of Digital Literacy. The infographic included the definition of digital literacy, safe internet practices, and the importance of building a professional online presence. I used icons, short text, and a clean layout to make the content visually appealing and easy to understand.

The main challenge was to keep the text concise while still conveying meaningful information. Designing with visuals helped me realize how powerful infographics can be in communicating ideas quickly. This task also taught me how to balance creativity with clarity.

Reflection:
Through this activity, I learned how to present complex ideas in a simple and engaging way. I also understood that visual communication is an important skill for both academic and professional contexts

Task 2 – Digital Portfolio

For Task 2, I created my professional digital portfolio by setting up accounts on GitHub, LinkedIn, and Kaggle. Each platform serves a different purpose: GitHub allows me to showcase my coding projects and collaborate with peers, LinkedIn helps me build a professional network and highlight my academic achievements, and Kaggle provides opportunities to practice data science and machine learning through competitions.

While creating these profiles, I focused on using a clear profile picture, accurate academic details, and highlighting my skills in Python, AI/ML, and problem-solving. This task helped me understand how important it is to maintain a professional digital identity, especially for placements and future career opportunities.

Reflection:
Through this activity, I realized that a strong digital portfolio is like an online resume. It not only represents my skills but also builds credibility in the professional world.

Task 3 – Coding & Collaboration

For Task 3, I practiced coding on HackerRank by solving a beginner-level challenge. This helped me improve my logical thinking and apply Python concepts in a practical way. Along with coding, I also created a Google Form quiz on Digital Literacy to collect responses from my peers. The form included multiple-choice questions about safe internet practices and professional communication.

After collecting responses, I used Google Sheets to analyze the data and visualize the results. This activity taught me how digital tools can be used not only for learning but also for collaboration and feedback.

Reflection:
Through this task, I gained confidence in solving coding problems online and learned how to design surveys for peer engagement. It showed me the importance of combining technical skills with communication tools to work effectively in a digital environment.

Task 4 – Email Etiquette

For Task 4, I drafted two professional emails to practice proper communication. The first email was written to a professor requesting an extension for an assignment deadline. The second email was addressed to an internship coordinator, expressing my interest in

joining their program. In both drafts, I focused on using a polite tone, clear subject lines, and concise language.

Additionally, I created a Social Media Do's and Don'ts checklist. This checklist highlights safe practices such as avoiding oversharing, maintaining privacy settings, and using respectful language online. It also warns against posting inappropriate content or engaging in arguments on public platforms.

Reflection:
Through this task, I learned that professional communication requires clarity, respect, and proper etiquette. I realized that emails and social media posts reflect our personality and professionalism, so they must be written carefully.

Task 5 – Cybercrime Awareness

For Task 5, I researched a case study on phishing attacks, where victims received fake emails that looked like official bank communication. These emails tricked users into sharing sensitive information such as passwords and OTPs, leading to financial fraud. I studied how such crimes are carried out and how students can protect themselves against them.

Based on this research, I created a prevention checklist that includes using strong passwords, enabling two-factor authentication, avoiding suspicious links, and reporting fraud immediately to the cybercrime helpline (1930). This checklist is designed to raise awareness among peers and encourage safe online practices.

Reflection:
Through this task, I realized how common and dangerous cybercrime has become. It taught me the importance of being alert online and adopting preventive measures. I now feel more confident about protecting myself and guiding others about digital safety.

Conclusion :

This Digital Literacy project has been a valuable learning experience for me. Through the five tasks, I explored different aspects of digital literacy such as visual communication, building a professional portfolio, practicing coding and collaboration, improving email etiquette, and understanding cybercrime awareness. Each task gave me practical exposure to tools like Canva, GitHub, LinkedIn, Kaggle, HackerRank, Google Forms, and more.

The project not only improved my technical skills but also helped me develop confidence in presenting myself professionally. I realized the importance of safe online practices and effective communication in both academic and career contexts. Overall, this project has prepared me to face future challenges, placements, and opportunities with a stronger digital identity and awareness.
